GOLDEN SUNSHADE[™]

GOLDEN SUNSHADE™: Stylish & Durable Protection For Your Vessel

Golden Sunshades™ are the pinnacle of sunshade design – crafted from years of expertise and industry best practices – reimagined with enhanced strength, aesthetic, and functionality. Our frames are fully welded, non-modular, and adjustable which provides a sturdy and beautiful canopy that can be re-configured for new boats. Fully heat welded vinyl tops are also stitched with Gore Tenara PTFE Thread for a stylish touch that offers unmatched reinforcement. Boat lift canopies are rated for up to 70MPH wind speeds with the top attached, and up to 180 MPH wind speeds with the top removed. Our Heavy-Duty canopy frame offers peace of mind for the largest vessels and wind-exposed areas. Designed for a wide variety of boat lifts in the harshest environments, our canopies are the Gold Standard for boat lift shades.

FEATURES

- Fully Welded Side Rails
- Single-Piece Bow Design
- Adjustable Frame & Legs
- Removable Bungee System
- Optional Heavy-Duty Frame
- Patio 500 Vinyl Tops (over 30 color options)
- Stitched with Gore Tenara PTFE Lifetime Thread
- Adaptable to a Wide Variety of Boat Lifts or Pilings

STRUCTURE

Sunshade™

WING TIP STYLE

- Standard design, preferred by most customers
- Provides the most overhead shading
- Open air flow for less vinyl stress during higher winds
- Minimized view obstruction
- Not always permissible if lift is pushed up against a setback or other space restriction
- Wing tips up to 2' are included with canopy (12'W x 30'L canopy with 2' wing tips will actually be 16'W x 30'L)

DROP DOWN STYLE

- Alternative design to wing tips
- Typically used when wing tip is not available
- Closed side design has reduced airflow and higher chances of wind damage to vinyl
- More obstructive to view
- Drop down sides up to 2' are included

STRUCTURE

We can also build a hybrid style canopy that is wing tip on one side and drop down on the other side. These can be useful if a customer wants wing tips but can't extend on one side of the lift.
